

Claims

1. A seat back for a chair comprising:
 - a support panel to contact a seated person; and
 - a flap portion, the flap portion extending from a top of the support panel and folding over the top and toward a back of the support panel, the flap portion capable of having indicia attached thereto.
2. The seat back of claim 1, wherein said seat back further comprises a back panel.
3. The seat back of claim 1, wherein said indicia are attached to said flap by hook and loop fasteners.
4. The seat back of claim 1, wherein said indicia are attached to said flap by elasticized loops.
5. The seat back of claim 1, wherein said flap has at least one pocket to attach said indicia to said flap.
6. The seat back of claim 1, wherein said flap has a transparent window affixed to said flap to attach said indicia to said flap.
7. The seat back of claim 1, wherein said flap is further capable of having an item attached thereto.
8. The seat back of claim 7, wherein said flap has a transparent window affixed to said flap to attach said indicia to said flap and at least one pocket to attach at least one item to said flap.

9. A seat back for a chair comprising:
- a support panel to contact a seated person;
 - a back panel opposite the support panel forming an envelope; and
 - a flap portion formed by the support panel and the back panel, the flap portion extending from a top of the support panel and the back panel and folding over the top and toward a back panel, the flap portion having a transparent window affixed thereto to receive and display indicia.
